AUDIBLE Audiobook Data Analysis

1. Project Overview

The "AUDIBLE Audiobook Data Analysis" project analyses audiobook data using Power BI to uncover insights related to pricing, ratings, duration and content distribution. The data was preprocessed to ensure accuracy, and interactive visualizations were created to explore key patterns and relationships. The aim of the project is to transform raw data into meaningful insights and present them through an intuitive dashboard for better understanding and decision-making.

2. Tools Used

- Microsoft Excel
- Power BI

3. Dataset

- **Source**: "audible_uncleaned.csv"
- **Data contains**: Name, Author, Narrator, Time, Release Date, Language, Star Rating, No: of Rating, Price etc.

4. Steps Followed

- Collected and imported the audiobook dataset into Excel and Power BI.
- Performed data cleaning by removing inconsistencies, correcting text errors, and standardizing formats.
- Split and transformed columns such as Rating and Time for better analysis.
- Converted Time data into numerical format (minutes) for visualization purposes.
- Loaded the cleaned data into Power BI using Power Query.
- Created measures required for analysis.
- Built interactive dashboards using various visuals such as bar charts, column charts, donut charts, and scatter plots.
- Added slicers for filtering by language, rating, and price.
- Designed a final summary dashboard to present key insights in a clear and user-friendly manner.

5. Key Insights

- A majority of audiobooks have high ratings, with most titles receiving ratings of 4.5 and above, showing overall positive user feedback.
- Longer audiobooks generally tend to have higher prices, showing a positive relationship between duration and cost.
- Some short duration audiobooks are priced relatively high, suggesting popular content.
- English is the most common language among audiobooks, making it the dominant category.
- Highly rated books also tend to have a higher number of user ratings, reflecting their popularity among listeners.

7. Files Included

- ‘audible_uncleaned.csv’ – Original Dataset
- ‘Audible_Cleaned Dataset [EXCEL].xlsx’ – Cleaned data
- ‘Audible_Visualization [POWER BI].pbix’ – Power BI Dashboard
- ‘README.md’ – Project Description
- ‘Project_Documentation.pdf’ – Project Documentation

8. How to use

- Open ‘audible_uncleaned.csv’ to view the original dataset.
- Open ‘Audible_Cleaned Dataset [EXCEL].xlsx’ to view the cleaned data.
- Open ‘Audible_Visualization [POWER BI].pbix’ in Power BI Desktop to explore the visuals.
